Premium Tempered Glass Screen Protector

Description

Made from a special reinforced processed glass, Orzly Tempered Protectors are designed and built to withstand any external scratches. To ensure the touch screen sensitivity of your device the back of the screen protector is covered with a strong silicic acid coating for easy installation and prevention of any gaps between your device and the protector.

- Oleophobic Coating**: Orzly Tempered Glass Screen Protectors have an oleophobic coating, this helps prevent fingerprints and other contaminants as well as making it easy to clean.
- Ultra Slim**: Made from a chemically treated, transparent tempered glass, the screen protector is only 0.24mm thick, making it ultra thin and light.
- Whole Transparency**: The silicon adhesive surface ensures there are no gaps between the screen protector and your device. This helps to ensure the clarity of your screen is not reduced.
- Surface Hardness**: **8-9H**
- Sensitive Touch**: Highly responsive with your device's touch screen.
- Shatter Proof**

Included

1. Orzly Tempered Glass Screen Protector
2. Alcohol Swab
3. Cleaning Cloth
4. Applicator Card
5. Dust Stickers

Tempered Glass Screen Protector

How to apply

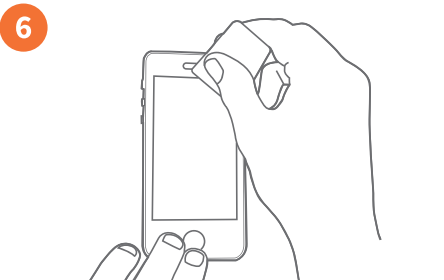

- 

Use the alcohol cleaning wipe and micro fibre cloth to clean the surface of your device.
- 

Use the Dust Stickers provided to remove any dust left on the screen.
- 

Pull back and remove the layer labelled Tab 1.
- 

Position the screen protector on your screen. Align the screen protector to any camera cut outs, buttons or other features on the surface of your device.
- 

Press down gently at the centre of the screen protector. The adhesive will spread over the device screen smoothly.
- 

If there are any visible air bubbles under the screen protector, use the Applicator card to gently press them out to the edges of the screen.

Tempered Glass Screen Protector

How to remove bubbles from under the screen protector

Bubbles underneath the Glass Screen Protector can be both unattractive and also affect the touch sensitivity of your display.

Push the bubbles under the screen protector to the edge of the device by using either the Applicator card or the cleaning cloth.

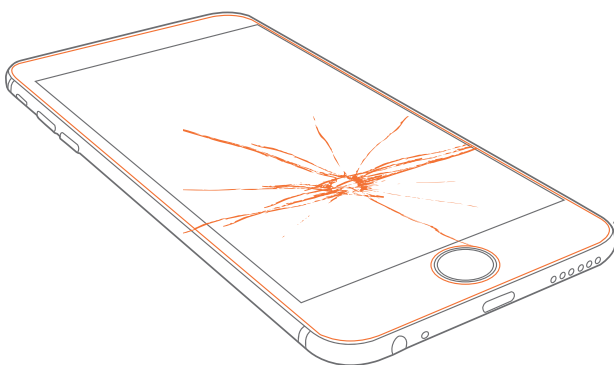

How to remove the Glass Screen Protector

If you would like to remove the Glass screen protector, follow the steps below.

- **If the screen protector is cracked**

A cracked screen protector will not shatter, however when removing the damaged screen protector from your phone, tiny glass particles can be exposed. It is essential that contact is not made with the cracks if protective gloves are not worn.

Avoid contact with the cracked region on the glass screen protector when removing.

Using the applicator card, lift the glass screen protector from one of the corners. Once lifted high enough, gently lift and peel off the glass screen protector.

- **If the screen protector is NOT cracked**

If you would like to remove the glass screen protector, follow the same steps as above. Using the Applicator card to lift a corner then using your fingers to remove the entire screen protector from your device screen.

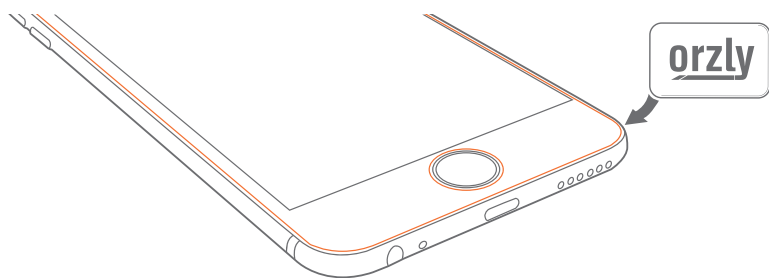

Once removed. Dispose of the Glass Screen Protector.

Tempered Glass Screen Protector

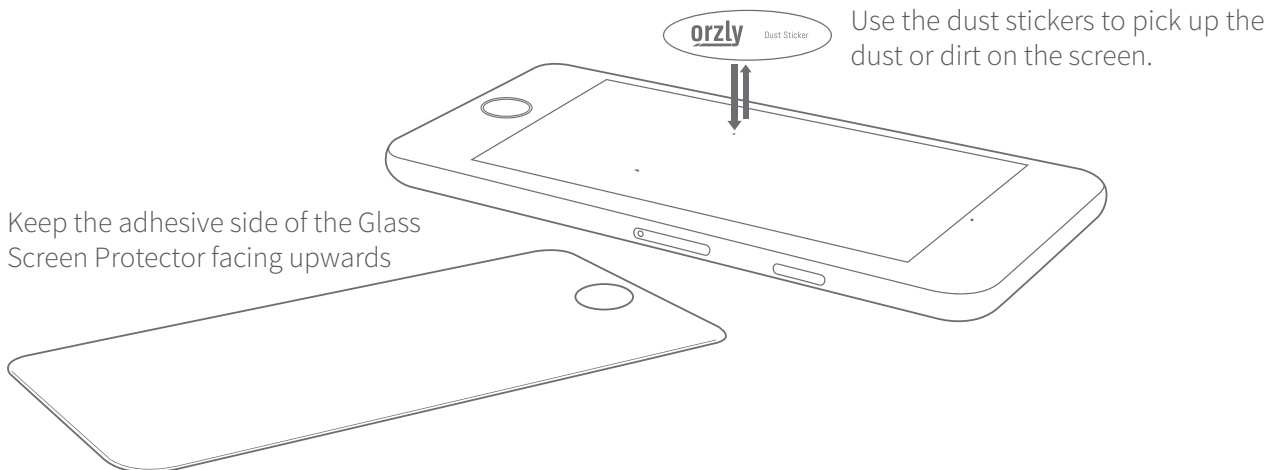

How to clean the Glass Screen Protector

When dust is present on the device screen when the screen protector is applied, this can cause bubbles to form. To remove the dust or dirt under the screen protector, follow the tips below.

- 1 Using the applicator card, gently lift the screen protector from the device screen.

- 2 Once removed keep the Glass Screen Protector to one side. Ensure the adhesive side is kept facing upwards.

- 3 Re-align and place the Glass Screen Protector back on the device screen.
